Super Natural Tutorial - Overview

This documentation introduces you to using the most important functions in Super Natural and guides you through adding 11 sample transactions.

Using these sections, you can gain hands-on experience of the product by creating practical examples.

The sample transactions provide an introduction to the major features of Super Natural.

The description of how to create the first transaction Sample1 is very detailed. The other transaction descriptions refer to parts of the first description when procedures are identical.

The descriptions of the first two transactions guide you through adding transactions using the Help, Asterisk List and Continue functions. The other descriptions tell you how to create the transactions as quickly as possible.

The transaction descriptions tell you where you can obtain further information on certain subjects.

The sample transactions use the demonstration files supplied with Super Natural.

The transaction descriptions assume that you have the following default transaction modes:

This documentation is organized in a number of example, each guiding you through a sample transaction. The transactions concentrate on the following areas of Super Natural:

- Sample 1: Basic Transaction
- Sample 2: Worksheet
- Sample 3: User Fields, Calculation and Logical Conditions Editors
- Sample 4: Modes and User File
- Sample 5: Layout Editor
- Sample 6: File Link
- Sample 7: File Lookup
- Sample 8: Dynamic Input Fields
- Sample 9: RPC Service in Context Mode with Primary, Secondary and Lookup files
- Sample 10: RPC Service in Context Mode with Dynamic Input
- Sample 11: RPC Service in Direct Mode with Summary Functionality

Sample 1: Basic Transaction

Task: Find the start and destination harbors of cruises with yachts of type ATLANTIC 29.

Sample 1: Basic Transaction

For this transaction, all you need to define are a primary file, display fields and selection criteria. These are the minimum requirements for a transaction.

Transaction Specification

Primary File	SAG-TOURS-E-CRUISE
Display Fields	1: CRUISE-ID 2: START-HARBOR 3: DESTINATION-HARBOR
Selection Criteria	CHARTER-YACHT-TYPE = 'ATLANTIC 29'

This section covers the following topics:

• Create the Transaction SAMPLE1

Create the Transaction SAMPLE1

To add a transaction

1. Select Transaction from the Main Menu.

Or:

Issue the TRANSACTION command.

The Transaction List screen appears. The Transaction List screen is an object list screen. For further information on object list screens, see Choosing an Object in **Starting Up** in the *Super Natural User's Guide*.

2. Type "SAMPLE1" in the Add field.

Or:

Issue the ADD TRANSACTION SAMPLE1 command.

You can abbreviate this command to AD TR SAMPLE1.

The Add Transaction window appears with the transaction name already entered in the Transaction ID field.

3. Type the description "Basic Transaction in the Description field" (optional).

To Choose File

The report requires data from the file **SAG-TOURS-E-CRUISE**.

- 1. Type an "asterisk (*)" in the File Name field.
- 2. Press Enter.

The File Selection List appears as in the following example:

14:1	2				** Super Natural **** Transaction List -	199	3-02-1 SN111

- 3. Mark **SAG-TOURS-E-CRUISE** either with any non-blank character or with the cursor position.
- 4. Press Enter.

The file name appears in the Add Transaction window as follows:

```

```

You can also type the file name **SAG-TOURS-E-CRUISE** directly in the File Name field.

5. Press Enter.

The Worksheet appears.

To Choose Fields

The report requires data stored in the fields CRUISE-ID, START-HARBOR and DESTINATION-HARBOR.

1. Enter an "asterisk (*)" in the first position of the Field Name column.

The Field Selection List window appears:

14:11 SAMPLE1		***** Super Natural ***** - Worksheet -	1993-02-0 SN301

- 2. Mark the fields CRUISE-ID, START-HARBOR and DESTINATION-HARBOR.
- 3. Press Enter.

The fields appear in the Field Name column and the Worksheet columns next to them are open. The fields are displayed in order of field reference. For further information on field references, see Field Reference (Ref) Column in **The Worksheet** in the *Super Natural User's Guide*.

You can also enter the names directly into the Field Name column.

Determine Display Sequence

CRUISE-ID is to be displayed first, START-HARBOR second and DESTINATION-HARBOR third in the report.

- 1. Type "1" in the Sequence column next to the field CRUISE-ID.
- 2. Type" 2" in the Sequence column next to the field START-HARBOR.
- 3. Type "3" in the Sequence column next to the field DESTINATION-HARBOR.

The Worksheet now has the following entries:

Notice that the Delete column is now protected for the fields selected for display. For further information on protected columns, see The Worksheet.

Create Selection Criteria using the Continue Function

The report requires information for cruises which have yachts with charter yacht type ATLANTIC 29.

1. Issue the SELECTION command.

You can abbreviate this command to SEL.

The Selection Editor appears.

2. Issue the CONTINUE command.

This command is allocated to PF10.

The Fields window appears:

- 3. Mark the Field List field.
- 4. Press Enter.

The Field Selection List appears showing the fields already in the Field Name column of the Worksheet marked with a chevron (>).

If the selection lines are correct, the transaction specification is complete. You have specified fields to use, display sequence and selection criteria.

To Run the Transaction

You can now either save the transaction and execute it later or you can run it to see the report immediately. If the selection lines are incorrect, you can either correct them or keep the transaction and finish it later.

1. Issue the RUN command. This command is allocated to PF11.

Sample 2: Worksheet

Task: List cruises sorted according to cruise starting date and show the cheapest cruise price available for each data and the cheapest cruise ofer all. Do not show cruises which cost less than 500.

This transaction uses the Worksheet to define fields for horizontal and vertical display, change field output definition, a sort field, a control field and a system function at control breaks.

This section covers the following topic:

• Create the Transaction SAMPLE2

Create the Transaction SAMPLE2

Add a Transaction

• Add a transaction called SAMPLE2 with the description Worksheet as described in Step 1 of the section **Sample 1** earlier in this chapter.

To Choose File

The reports requires data from the fileSAG-TOURS-E-CRUISE.

• Choose the file **SAG-TOURS-E-CRUISE** as described in Step 2 of the section **Sample 1**.

To Choose Fields

The report requires data stored in the fieldsCRUISE-ID, CHARTER-YACHT-TYPE,START-DATE, END-DATE,START-HARBOR, DESTINATION-HARBORand CRUISE-PRICE.

• Choose the fields as described in Step 3 of **Sample 1**.

To Determine Display Sequence for Vertical Output

START-DATE and END-DATE are to be displayed first with START-DATE above END-DATE.

1. Enter a "question mark (?)" in the Sequence column next to the field START-DATE.

The Help: Seq Column window appears:

2. Mark Vertical Output.

7. Press Enter.

1A appears in the Sequencecolumn next to the field START-DATE. You can also enter 1A directly in the Sequencecolumn.

8. Do the same for the field END-DATE but specify the position 1B.

This positions the field END-DATE directly beneath the field START-DATE in column 1 of the report.

You can also enter 1B directly in the Sequence column.

To Change Header of Vertical Output Column

The columns for vertical output have the header of the field marked with the letter nearest A by default. This report requires a column header which is more appropriate to the contents, so you need to change the header for the first field in the column.

1. Enter a "question mark (?)" in the Definition column next to the field START-DATE.

The Help: Def Column window appears:

To Determine Display Sequence for Horizontal Output

The rest of the fields are to be displayed horizontally.CRUISE-PRICE is to be displayed first after the vertical output column, then CRUISE-ID,START-HARBOR, DESTINATION-HARBOR, and CHARTER-YACHT-TYPE. When you just enter a number in the Sequence column, the field is displayed horizontally by default.

- 1. Type "2" in the Sequence column next to the field CRUISE-PRICE.
- 2. Type "3" in the Sequence column next to the field CRUISE-ID.

- 5. Type "6" in the Sequence column next to the field CHARTER-YACHT-TYPE.

To Define Control Break Processing

The report must present data sorted according to the cruise starting date and show the cheapest cruise price available for each date. However, the report should not show cruises costing less than 500.

1. Enter a "question mark (?)" in the Sort/Control (S/C) column next to the field START-DATE.

The Help: S/C Column window appears.

- 2. Mark the Control Field field.
- 3. Mark the Sort/Control Level field.

The Specify System Functions window now has the following entries:

9. Press Enter.

A chevron (>) appears in the Function (Func)column next to the field CRUISE-PRICE to indicate that the column has been used.

Note:

For further information on control break processing, see The Sort/Control (S/C) Column and The Function (Func) Column in **The Worksheet** in the *Super Natural User's Guide*.

To Define Further Sort Order

The cruises for each starting date are to be sorted according to their start harbor.

• Enter "S2" in the Sort/Control (S/C) column next to the fieldSTART-HARBOR.

You can also use the help system by entering a "question mark (?)" as described above.

To Define Selection Criteria

1. Issue the SELECTION command. You can also abbreviate this command to SEL.

The Selection Editor appears. The report requires information on cruises costing more than 500.

2. Enter "AT GE 500" in the editor area.

AT is the Super Natural field reference for the field CRUISE-PRICE. You can always use field references instead of field names in the full-screen editors. The field references for fields in the Field Name column of the Worksheet are listed next to them in the Field Reference (Ref) column. GE is the operatorGreater Equals (greater than or equal to). Instead of GE, you can use the special characters>=.

To Run the Transaction

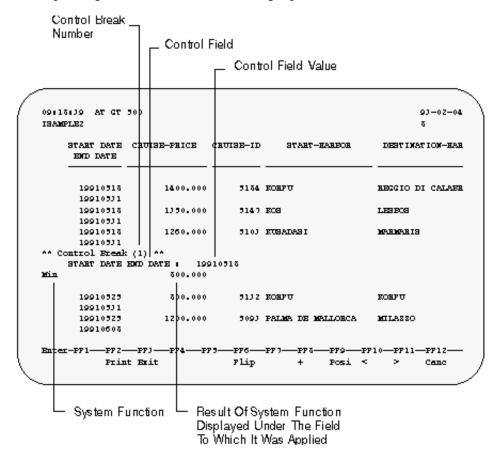

1. Run the transaction as described in Step 6 of the section **Sample 1**.

The Report Line Length window appears because you have chosen too many fields to be displayed together horizontally on one screen:

- 2. Mark the Enlarge available line size option.
- 3. Press Enter.

The report is generated. Part of the resulting report is shown below:

Because you chose the option Enlarge Available Line Size, the report is wider than the screen.

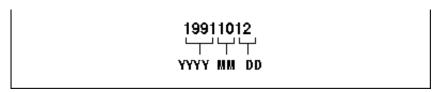

- 4. Use PF11 and PF10 to shift to the left and right in the report.
- 5. Use PF9 to position the field at cursor position to the left-hand side of the screen.

Sample 3: User Fields, Calculation and Logical Conditions Editors

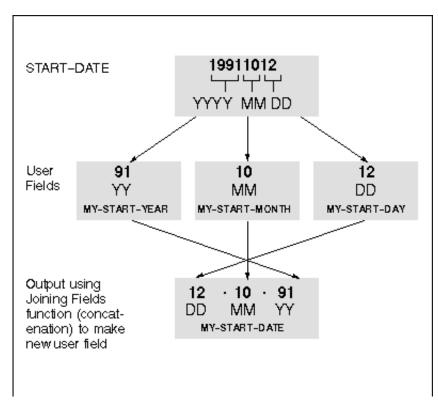

Task: List cruises which use charter yacht type ATLANTIC 29. Display end date of cruise under start date and present the information in the format DD.MM.YY. Display the text 'too late' insted of the datasets for cruises which start after 7.1.1991.

The steps in this transaction are performed in a logical order. The order in which the steps are carried out is different to the order in the previous sample transactions.

The data in the fields START-DATE and END-DATE is stored in the format YYYYMMDD which is difficult to read at a glance (you can confirm this by adding a report using the file **SAG-TOURS-E-CRUISE** which has the selection criteria AA and the display fields START-DATE and END-DATE). The following is an example where Y = year, M = month and D = day:

The report requires that the date be presented with the format DD.MM.YY. To do this, you must create three user fields from the fieldSTART-DATE: one with the year information, one with the month information and one with the day information. You then join the user fields together in the order day, month, year with periods (.) using the Joining Fields (Concatenation) function in the Calculation Editor as shown in the following diagram:

You then do the same for the field END-DATE.

To add a transaction

1. Issue the ADD TRANSACTION SAMPLE3 command.

The Add Transaction window appears.

2. Type "User Fields and Editors" in the Description field (optional).

To Choose a File

The report requires data from the file SAG-TOURS-E-CRUISE.

- 1. Type **SAG-TOURS-E-CRUISE** in the File Name field.
- 2. Press Enter.

The Worksheet appears.

To Choose Fields

The report requires data stored in the fieldsCRUISE-ID, START-HARBOR andDESTINATION-HARBOR.

• Type CRUISE-ID, START-HARBORand DESTINATION-HARBOR beneath each other in the Field Name column.

Or:

Choose the fields using the Asterisk List function as described in Step 3 of the section Sample 1.

To Define Selection Criteria

The report requires data for cruises of charter yacht type ATLANTIC 29.

1. Issue the SELECTION command.

You can abbreviate this command to SEL.

The Selection Editor appears.

2. Enter "CHARTER-YACHT-TYPE = 'ATLANTIC 29'" in the editor area.

Note:

The field CHARTER-YACHT-TYPE now appears in the Field Name column of the Worksheet.

To Present Start Date and End Date of Cruise in the Format DD.MM.YY.

1. Issue the CALCULATION command. You can abbreviate this command to CAL.

The Calculation Editor appears. The first result field in the editor area will be the user field MY-START-DATE and will be composed of the user fields MY-START-YEAR, MY-START-MONTH and MY-START-DAY separated by periods (.). You use the Joining Fields (concatenation) function to join the fields and periods.

- 2. Type "MY-START-DATE = MY-START-DAY".
- 3. Type the Joining Fields operator valid for your site.

If you do not know which operator to use, ask your Super Natural administrator.

Or:

Issue the CONTINUE command. This command is allocated to PF10.

To Define Logical Conditions

The report requires that the text 'Too Late' be displayed in the Cruise/To/From column for cruises which start later than July 1st 1991.

1. Issue the LOGIC command. You can abbreviate this command to LOG.

The Logical Conditions Editor appears.

2. Type "START-DATE GT 19910701" in theIF line.

The field START-DATE now appears in the Field Name column in the Worksheet.

- 3. Type "MY-START-DATE = 'TOO LATE'" in the THEN line.
- 4. Tab to the Clause Type column (on the right).
- 5. Overtype the E which is already there with aT to create a new THENline.
- 6. Press Enter.
- 7. Type "MY-END-DATE = ' '" in the newTHEN line.

The Logical Conditions Editor now contains the following entries:

```

Sample 4: Modes and User File

Task: Show all cruises which use a yacht of charter yacht type ATLANTIC 29 listed in order of cruise starting date. Show how many cruises there are in each month.

- 1. Present the data in a list
- 2. Present the data with one record on each page
- 3. Summarize the data
- 4. Create a user file containing the data

This transaction uses the Selection Editor, a control field, a system function and special break conditions to select the data required. The transaction uses different transaction modes to present data as required and to create a user file which contains the report data.

The steps in this transaction are performed in a logical order. The order in which the steps are carried out is different to the order in the previous sample transactions.

Transaction Specification

Primary File	SAG-TOURS-E-CRUISE			
Display Fields	1: CRUISE-ID 2:START-HARBOR 3:DESTINATION-HARBOR 4:START-DATE

System Functions	Count CRUISE-ID			

This section covers the following topics:

• To create the transaction SAMPLE4:

To create the transaction SAMPLE4:

To Add a Transaction

1. Issue the ADD TRANSACTION SAMPLE4 command.

The Add Transaction window appears.

2. Type "Modes and User File" in the Description field (optional).

To Choose a File

The report requires data from the fileSAG-TOURS-E-CRUISE.

- 1. Type **SAG-TOURS-E-CRUISE** in the File Name field.
- 2. Press Enter.

The Worksheet appears.

To Choose Fields

The report requires data stored in the fieldsCRUISE-ID, START-DATE,START-HARBOR andDESTINATION-HARBOR.

• Type CRUISE-ID, START-DATE, START-HARBOR and DESTINATION-HARBOR beneath each other in the Field Name column..

Or:

Choose the fields using the Asterisk Listfunction as described in Step 3 in Sample 1.

To Determine Display Sequence for Horizontal Output

- 1. Type "1" in the Sequence column next to the fieldCRUISE-ID.
- 2. Type "2" in the Sequence column next to the fieldSTART-HARBOR.
- 3. Type "3" in the Sequence column next to the fieldDESTINATION-HARBOR.
- 4. Type "4" in the Sequence column next to the fieldSTART-DATE.

To Define Control Break Processing

The report requires all cruises which use a yacht of charter yacht type ATLANTIC 29 listed in order of cruise starting date. The number of cruises per month is to be displayed.

1. Type "C1" in the Sort/Control (S/C) column next to the fieldSTART-DATE.

The cruises will be listed in order of their starting date.

The data in the field START-DATE is stored in the format YYYYMMDD where the first four characters show the year, the third (3rd) and fourth (4th) the month and the fifth (5th) and sixth (6th) the day. You can use the Special Break Conditions function to define a control break when the first six characters of the fieldSTART-DATE change.

2. Enter "CB" in the Function (Func) column next to the fieldSTART-DATE.

The Special Break Conditions window appears.

3. Enter "6" in the First 'n' Characters field.

Task: Copy and change the report SAMPLE4 as follows:

- 1: Change the transaction modes for reporting.
- 2: Add a preface.
- 3: Underline the field headers.
- 4: Add text explaining the data shown at the control break.
- 5: Add grand total with explanatory text.

This transaction takes the report SAMPLE4 and uses the Layout Editor to make it more understandable.

Line and field commands in the Layout Editor are shown using the period (.) as escape character. Use the escape character defined at your site. The escape character defined at your site is displayed in the delimiter information section of the Layout Editor.

Each text constant must be preceded by a delimiter of the classTEXT. The last word of the preface does not fit into the editor area shown.

3. Issue the . . I line command in the last line of text.

A line is inserted after the last line of text (you can not see it).

- 4. Press PF8 to page forwards.
- 5. Enter report as the last word of the preface.
- 6. Press PF7 to page backwards.

The report requires that the word PREFACE be highlighted.

7. If you have a delimiter for intensified text, type it before the word Preface.

The delimiter for intensified text in the example is '_'.

To Center the Text

1. Issue the . . C line command in the same line as the word PREFACE.

The word PREFACE is centered.

2. Issue the . . C* line command in the next line of text.

The line is centered and all the lines below are moved the same distance to the right but are not centered.

Because the Scan Right (>) function is available, you can see that the report is wider than the screen.

Sample 6: File Link

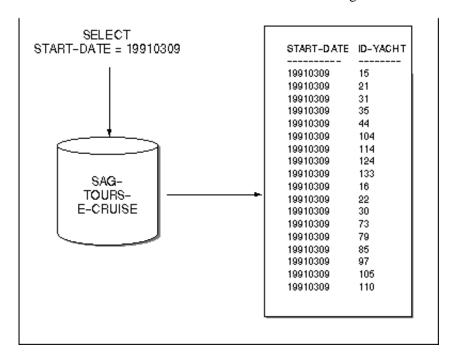

Task: Find both the name and type of the yacht in which a customer sailed on a cruise starting on March 9 1991. the customer is very tall and remembers that the yacht had head room of more than 1m95cm.

Information about cruise starting dates is stored in the fileSAG-TOURS-E-CRUISE. Yacht names and technical specifications are stored in the file SAG-TOURS-E-YACHT. Because you need information from two files, you must link them using the INCLUDE command.

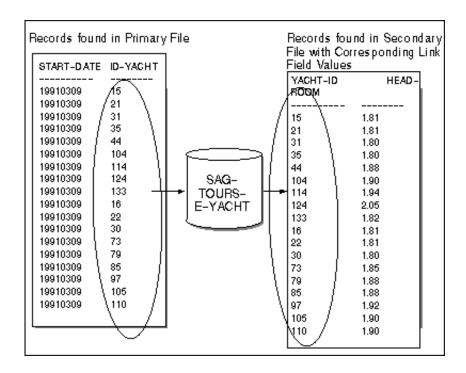

For further information on linking files, see**INCLUDE command** and **What is File Linking?** in Files in *Super Natural User's Guide*.

Super Natural searches the primary and secondary files as follows when the transaction is run:

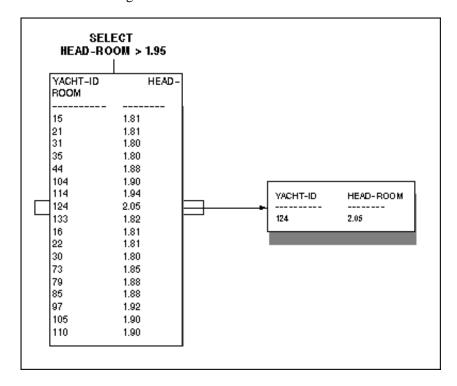

1. A search is made in the **SAG-TOURS-E-CRUISE** file for all records which meet the selection criterion START-DATE = 19910309. The following records are found:

 When a record is found in the primary file, Super Natural takes the value of its link field (ID-YACHT) and searches the secondary file for records whose link field (YACHT-ID) has the same value. The following records are found:

1. The selection criterion HEAD-ROOM > 1.95 is applied to the records found in the secondary file. The following record is found.

Transaction Specification

Sample 7: File Lookup

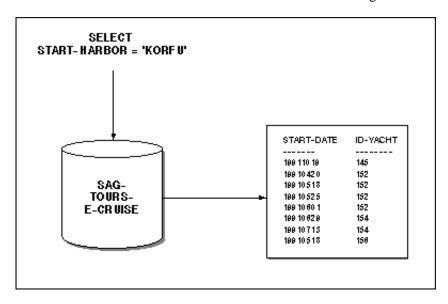

Task: List cruises starting in Korfu with their destination and starting date in order of starting date. List the type, name and length of the yachts which sail on these cruises.

Information on cruise starting harbor, starting date and cruise destination is stored in the file **SAG-TOURS-E-CRUISE**. Information on yacht length, type and name is stored in the file **SAG-TOURS-E-YACHT**. As each cruise can only have one value for destination, yacht length, name and type, you can take **SAG-TOURS-E-CRUISE** as the primary file and perform a lookup on the file **SAG-TOURS-E-YACHT** using the INCLUDE command.

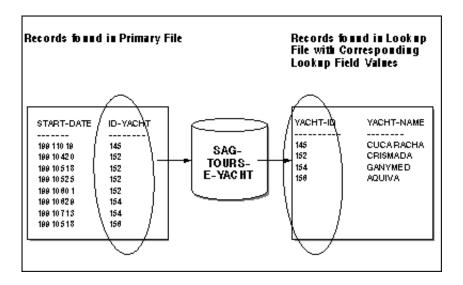

For further information on file lookup, see**INCLUDE command** and **What is File Lookup?** in Defining Files in *Super Natural User's Guide*.

Super Natural searches the primary file and lookup file as follows when the transaction is run:

1. A search is made in the **SAG-TOURS-E-CRUISE** file for all records which meet the selection criterion START-HARBOR = 'KORFU'. The following records are found:

1. For each record found in the primary file, Super Natural searches the lookup file (SAG-TOURS-E-CRUISE) for the *first* record where the value of the lookup field (ID-YACHT) is the same as that of the link field in the primary file record. The following records are found:

1. The records found in the primary file are returned and the desired information from the corresponding records in the lookup file is displayed.

The 'L's in the Database (DB) column indicate that the fields next to them are in the lookup file. Note that the Sequence (Seq),Sort/Control (S/C), Function (Func) and Delete (Del) columns are protected for the field YACHT-IDwhich is the lookup field in the lookup file.

To Define Selection Criteria

1. Issue the SELECTION command. You can also abbreviate this command to SEL.

The Selection Editor appears.

The report requires information on cruises which start in Korfu.

2. Enter "START-HARBOR = 'KORFU'" in the editor area.

Note:

You can not define selection criteria for fields contained in the lookup file.

To Run the Transaction

1. Issue the RUN command.

Because the fields and the field headers you have chosen for display are too wide to fit on the standard page, the Report Line Length window appears.

2. Mark the option Enlarge Available Line Size.

Sample 8: Dynamic Input Fields

Task: Find the start date, end date and number of bunks of cruises whose start harbor begins with D or E and for cruises whose start harbor begins with U, V or W.

This transaction uses dynamic input fields to enable you to view different ranges of data each time you run it. The transaction uses the Layout Editor to show the range you are currently viewing in the title of the report.

Transaction Specification

Primary File	SAG-TOURS-E-CRUISE
Display Fields	1: START-HARBOR 2:START-DATE 3: END-DATE 4:BUNK-NUMBER
Dynamic Input Fields	HARBOR1 HARBOR2
Selection Criteria	START-HARBOR = HARBOR1 THRU HARBOR2

This section covers the following topics:

• Create the Transaction SAMPLE8

Create the Transaction SAMPLE8

To Add a Transaction

1. Issue the ADD TRANSACTION SAMPLE8 command.

The Add Transaction window appears with the transaction name already entered in the Transaction ID field.

2. Type the description "Dynamic Input Fields" in the Description field (optional).

To Choose File

The report requires data from the file**SAG-TOURS-E-CRUISE**.

- 1. Type the file name **SAG-TOURS-E-CRUISE** in theFile Namefield. You can alternatively use theAsterisk (*) List function.
- 2. Press Enter.

The Worksheet appears.

To Choose Fields

The report requires data stored in the fieldsSTART-HARBOR, START-DATE,END-DATE and BUNK-NUMBER.

1. Enter an "asterisk (*)" in the first position of the Field Name column.

The Field Selection List window appears.

2. Mark the fields START-HARBOR, START-DATE, END-DATE and BUNK-NUMBER.

You must use PF2 to page forward toBUNK-NUMBER.

- 3. Type "3" in the Sequence column next to the field END-DATE.
- 4. Type "4" in the Sequence column next to the field BUNK-NUMBER.

To Define Selection Criteria

The report requires information for cruises with a range of start harbors. You must define two dynamic input fields in which you can enter the first value of the field START-HARBOR you want to see and the last value you want to see when the transaction is run.

1. Press PF10.

The SELECTION command is issued and the Selection Editor appears.

- 2. Enter "START-HARBOR =" in the editor area.
- 3. Press PF10.

The CONTINUE command is issued and the Value window appears.

- 4. Select "Define Dynamic Input Field".
- 5. Press Enter.

The Define User Field window appears.

- 6. Type "Start1" in the Name or Value field.
- 7. Overtype the existing entry in the Length field with 5.

Sample 9: RPC Service in Context Mode with Primary, Secondary and Lookup files

Task: Generate an RPC service based on the travelling information to process on your PC via Excel.

The RPC Generation is executed in Context mode.

Prerequisites

Your administrator has to set the Service Type of the Service Generation Options in you user profile to R.

If you Server is running under Natural Security, you have to set up your RPC example client to run this example correctly.

To set up the RPC sample client for Natural Security

- 1. Execute the Program **USR1071P** from the system library**SYSEXT** in your Natural for Windows.
- 2. Fill the following fields in the appearing screens as follows:
 - Set RPC Data field to X
 - Set Code field to T
 - Set User-ID field to the Logon-ID of Natural Mainframe
 - Set User ID's Password field to the Password of Natural Mainframe

Transaction Specification

Primary File	SAG-TOURS-E-YACHT
Secondary File	SAG-TOURS-E-CRUISE
Link field in primary file	YACHT-ID
Link field in secondary file	ID-YACHT
Lookup File	SAG-TOURS-E-PERSON

This section covers the following topics:

- Create the Transaction SAMPLE9
- Generate the RPC Service
- Proceed the data on your PC

Create the Transaction SAMPLE9

To Add a Transaction

1. Issue the ADD TRANSACTION SAMPLE9 command.

The Add Transaction window appears with the transaction name already entered in the Transaction IDfield.

2. Type the description "Context Mode with Primary, Secondary and Lookup Files" in the Description field (optional).

To Choose Primary File

The report requires data from the file**SAG-TOURS-E-YACHT**.

1. Type the file name **SAG-TOURS-E-YACHT** in the FileName field. You can alternatively use the Asterisk (*) List function.

2. Press Enter.

The Worksheet appears.

To Choose Secondary File

1. Issue the INCLUDE command

The Include Files window appears.

2. Enter **SAG-TOURS-E-CRUISE** in the Secondary File field.

- 4. Type PERSON-ID in the Lookup Field in Lookup File.

Note:

You can also use the Asterisk (*) Listfunction to review the field list for each file.

5. Press Enter.

Because the Select Lookup Display Fields field is marked by default, the Field Selection List window for the lookup file appears.

6. Mark the fieldsSURNAME,FIRST-NAME-1 and COUNTRY to select them.

To Choose Fields

The report requires data stored in the fields YACHT-ID, YACHT-NAME, START-DATE, START-HARBOR, DESTINATION-HARBOR, ID-YACHT, ID-SKIPPER, PERSON-ID, SURNAME, FIRST-NAME-1, COUNTRY.

1. Choose the fields as described in Step 3 of Sample 1.

To Determine Display Sequence

- 1. Type "1" in the Sequence column next to the field YACHT-NAME.
- 2. Type "2" in the Sequence column next to the field YACHT-ID.
- 3. Type "3" in the Sequence column next to the field START-DATE.

- 3. Specify the RPC Service Object Name "RPCSMPL1" and the Library "NSNSAMPL" to generate the RPC Service.
- 4. Select Generation Mode Context.
- 5. Delete the Record Limit and press Enter to receive the recommended record limit for the generation.
- 6. Press Enter.

The RPC Service is generated. You can view it by logging on to the respective library and choosing the RPC Service Object. You will find the description of the source in the *Super Natural Administration Manual*.

Proceed the data on your PC

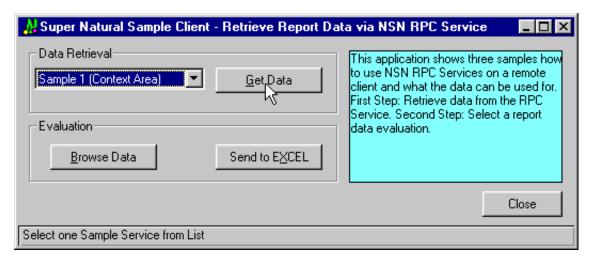

To proceed the data on your PC

Before you can work with the generated RPC Service, you have to set up your Natural environment and load the example data from the Documentation CD to your Natural for Windows environment. You will find the description how to set up your environment for the RPC Service in the *Super Natural Installation Manual*.

1. Open your Natural for Windows.

2. Execute **User Libraries > NSNSAMPL > Dialogs > Menu** by using the Execute button in the symbol list.

The following dialog appears:

- 3. Select Sample 1 (Context Area) in the Data Retrieval field.
- 4. Choose Get Data to load the sample data.

Now you can browse the data.

5. In order to proceed with this data on your PC, send it to Excel by selecting the Send to Excel button.

The data is sent to Excel and inserted into a table.

Sample 10: RPC Service in Context Mode with Dynamic Input

Task: Generate an RPC service based on travelling information by entering a start and end value. Then process the service on your PC via Excel.

This transaction uses dynamic input fields to enable you to view different ranges of data each time you run it. The RPC Generation is executed in Context mode.

Prerequisites

Your administrator has to set the Service Type of the Service Generation Options in you user profile to R.

If you Server is running under Natural Security, you have to set up your RPC example client to run this example correctly.

To set up the RPC sample client for Natural Security

- 1. Execute the Program **USR1071P** from the system library**SYSEXT** in your Natural for Windows.
- 2. Fill the following fields in the appearing screens as follows:
 - Set RPC Data field toX
 - Set Code field to T
 - Set User-ID field to the Logon-ID of Natural Mainframe
 - Set User ID's Password field to the Password of Natural Mainframe

Proceed the data on your PC

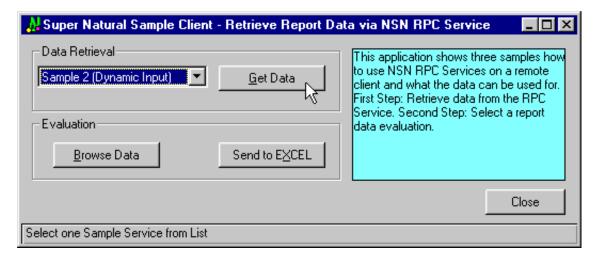

To proceed the data on your PC

Before you can work with the generated RPC Service, you have to set up your Natural environment and load the example data from the Documentation CD to your Natural for Windows environment. You will find the description how to set up your environment for the RPC Service in the *Super Natural Installation Manual*.

1. Open your Natural for Windows.

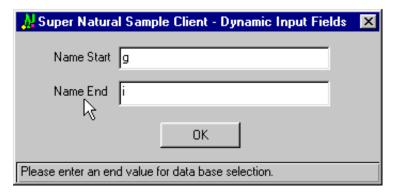

2. Execute **User Libraries > NSNSAMPL > Dialogs > Menu** by using the Execute button in the symbol list.

The following dialog appears:

- 3. Select **Sample 2** (Dynamic Input) in the Data Retrieval field.
- 4. Choose Get Data to load the sample data.

The following dialog appears:

- 5. Enter the start and end value as dynamic input.
- 6. Select OK.

The data is loaded from your mainframe environment and displayed on your PC where you can browse the data.

7. In order to proceed with this data on your PC, send it to Excel by selecting the Send to Excel button.

The selected data is sent to Excel and inserted into a table.

Sample 11: RPC Service in Direct Mode with Summary Functionality

Task: Generate an RPC service based on the shipping data using the summary functionality to process on your PC via Excel.

This transaction uses the summary function to show cumulated data for statistical purposes. The RPC Generation is executed in Direct Mode.

Prerequisites

Your administrator has to set the Service Type of the Service Generation Options in you user profile to R.

If you Server is running under Natural Security, you have to set up your RPC example client to run this example correctly.

To set up the RPC sample client for Natural Security

- 1. Execute the Program **USR1071P** from the system library**SYSEXT** in your Natural for Windows.
- 2. Fill the following fields in the appearing screens as follows:
 - Set RPC Data field toX
 - Set Code field to T
 - Set User-ID field to the Logon-ID of Natural Mainframe
 - Set User ID's Password field to the Password of Natural Mainframe
